Pham Viet Thanh

Software Engineer

0396200543 | thanhagar123@gmail.com | linkedin.com/in/phmthanh | github.com/Thanhbo209 | thanhpham.space

Education

HCMC University of Foreign Languages and IT — Ho Chi Minh City, Vietnam
Bachelor of Software Engineering — *Nov. 2024 – Apr. 2027*

Skills

Programming Languages: JavaScript/TypeScript, Python, OOP
Backend: Node.js/Express, RESTful APIs (HTTP, JSON), Authentication & Authorization (JWT), Redis, FastAPI
Databases: PostgreSQL (SQL, schema design, relations), MongoDB, Prisma ORM
DevOps & Tools: Git, GitHub, Docker, CI/CD
Frontend: React, Next.js, Tailwind CSS, Vite, HTML/CSS
Data & AI: Pandas, NumPy, Scikit-learn, XGBoost, AI API integration
Languages: Vietnamese (Native), English (TOEIC Listening & Reading: 870)

Experience

Backend AI Engineering Intern — Jun – Sep. 2026
FlyRank AI — *Remote*

- Build backend services and REST APIs with TypeScript, Node.js, and PostgreSQL to support AI-powered applications
- Integrate AI APIs into backend applications and implement document ingestion pipelines for AI-driven workflows
- Design interactive workflow orchestration interfaces with React Flow; work via Git-based development, testing, and code reviews

Projects

AI Gold Market Prediction | GitHub — Present
TypeScript, Next.js, Python, FastAPI, Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib, SQLAlchemy, PostgreSQL, Docker, GitHub Actions, Pytest

- Built a Python data pipeline to ingest and validate historical gold futures (GC=F) OHLC data, engineer technical features, and generate next-day direction labels.
- Trained and evaluated majority-class, Logistic Regression, and XGBoost classifiers using chronological train/validation/test splits; achieved 55.1% test accuracy with the selected baseline model.
- Implemented reusable model artifact serialization and metadata persistence, automated tests for prediction and artifact handling, and a CLI for generating direction predictions from the latest historical data.

Freight Comparison & Logistics CRM | GitHub — Oct. 2026
TypeScript, Next.js, Prisma, PostgreSQL, Supabase Auth

- Deployed and currently used by a small logistics team at Glotrans to compare carrier freight quotes and manage the quote approval workflow
- Designed a multi-tenant PostgreSQL schema in Prisma; implemented RBAC for `ADMIN`, `SALES_MANAGER`, and `SALES` roles using Supabase Auth (SSR sessions, Google OAuth) and server-side role guards
- Built a rate comparison engine over itemized freight charges with multi-currency, computing profit and margin per carrier quote and ranking by profit, cost, and margin; added a manager approval flow to lock the winning quote
- Implemented mutations as Next.js Server Actions with Suspense streaming; configured a bounded `node-postgres` pool via Prisma `adapter-pg` to avoid connection exhaustion on Supabase's transaction pooler

LeetCode DSA Tracker | GitHub — Sep. 2026
TypeScript, Next.js, Prisma, Supabase, Chrome MV3, Gemini API, Vitest

- Built a Chrome MV3 extension that captures LeetCode submissions via its GraphQL API and syncs them to the backend over session cookies
- Integrated Gemini for complexity audits and structured notes; built dual-model failover with quota-aware cooldowns (Flash 3.6 and Flash 3.5 for failover)
- Fixed serverless connection-pool exhaustion with Supavisor and Prisma `adapter-pg`; added ISR to cut redundant queries
